# A visual guide to the app

Current screens, feature flows and decisions for the next release.

## 36 page and feature guides

Use the screenshots to understand the experience. Use the flow diagrams to follow each task. Use the discussion question to decide what to keep, change or build next.

**READ THE STATUS**

Current UI: implemented in the local frontend. Planned placeholder: visible destination, future capability not implemented. Proposed flows: discussion ideas, not delivery commitments.

All captures use labelled sample data. No production account or real climbing history is shown. This is a product walkthrough, not production acceptance testing.

24 October 2026 / Phone viewport: 390 x 844

THE WHOLE APP

# Five tabs. One personal climbing journal.

FIRST VISIT

## Home

Personal summary and recent visits

## Explore

Menu of planned community features

## Sessions

Visit journal, Climbs and route logging

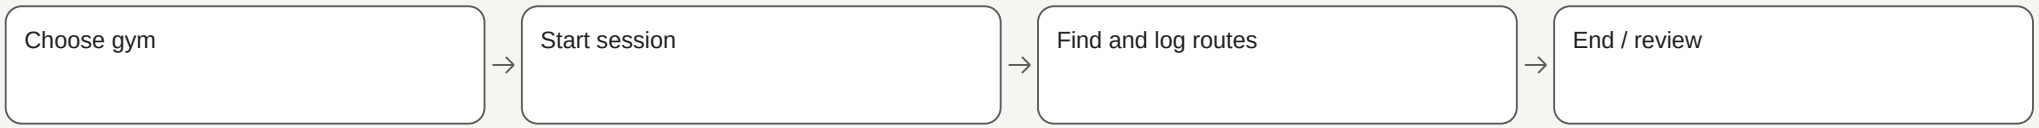

## Gyms

Find gyms, maintain routes, start a visit

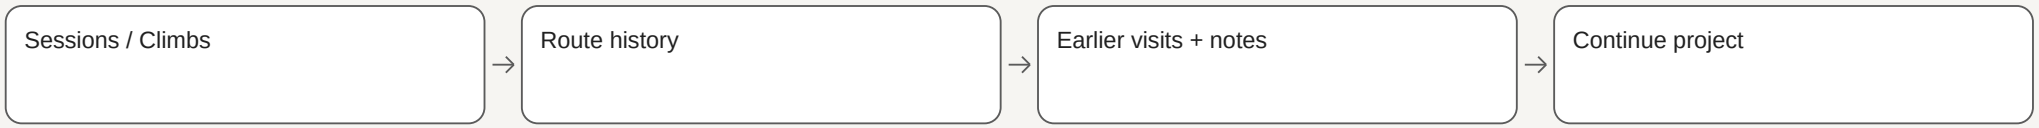

## You

Private account, totals and settings plans

A CLIMBING VISIT

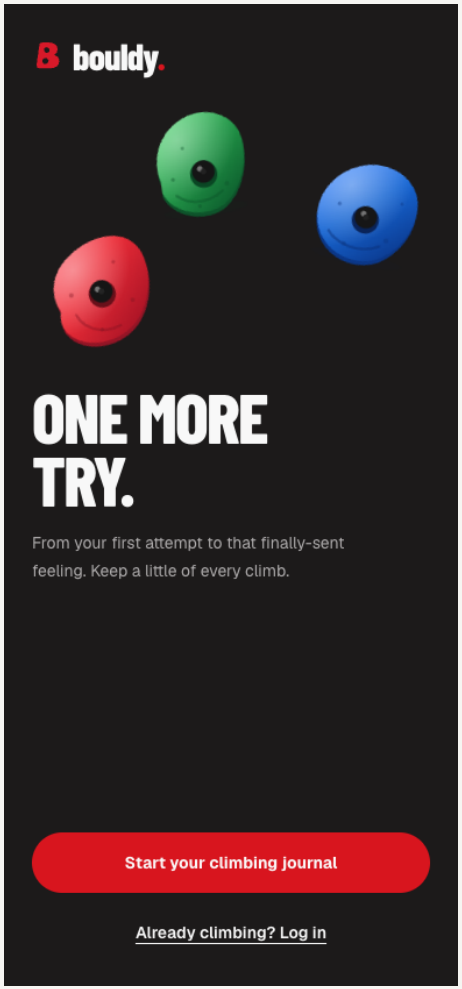

PROGRESS OVER TIME

# 01 Welcome

Introduce Bouldy and give a new or returning climber a clear way in.

Local sample capture

### WHAT HAPPENS HERE

- Open Log in
- Open Sign up

### RETURNING CLIMBER

Welcome → Log in → Home

### NEW CLIMBER

Welcome → Sign up → Home

### KEEP IN MIND

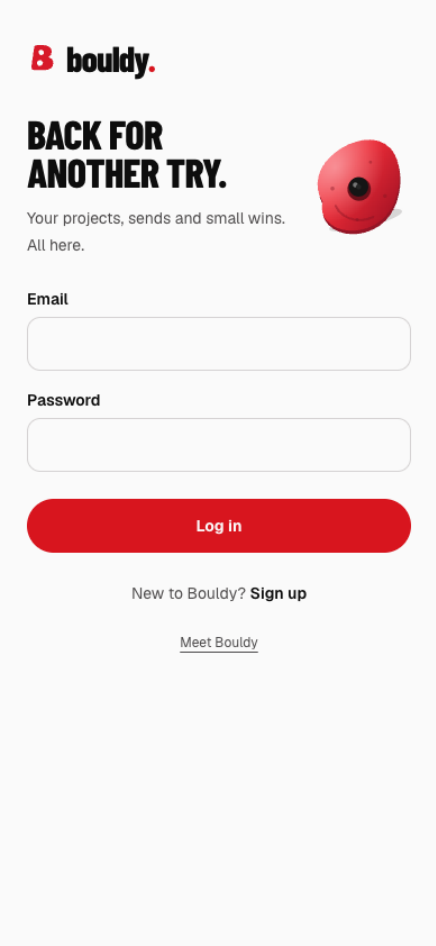

Signing in is required to open the journal. A successful sign-up also signs the user in.

### DISCUSS WITH THE TEAM

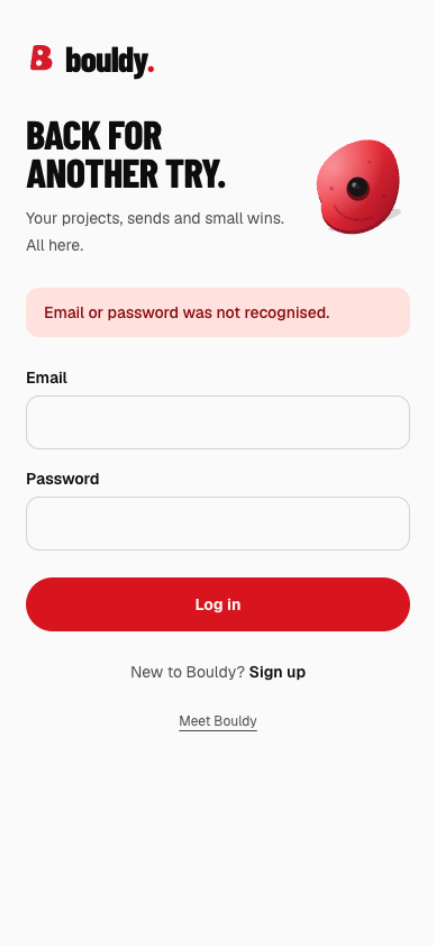

**Does this explain why a climber should use Bouldy?**

# 02 Log in

Return to your own climbing journal.

Local sample capture

Error state

## WHAT HAPPENS HERE

- Enter email and password
- Submit or switch to Sign up

## SUCCESS

Enter details → Log in → Home

## FAILURE

Submit → Read error → Correct and retry

## KEEP IN MIND

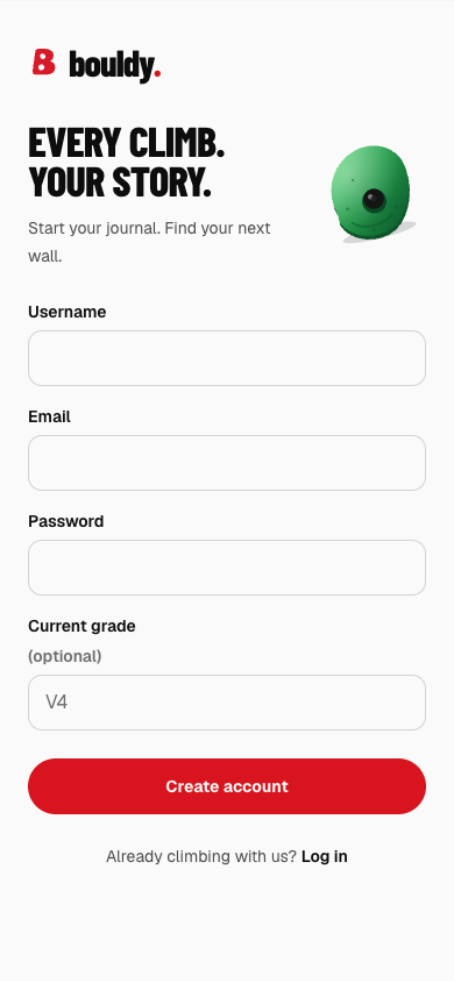

There is no password-reset or OTP screen in this frontend. An error keeps the user on Log in.

## DISCUSS WITH THE TEAM

**What account-recovery journey must we add before a wider release?**

# 03 Create an account

Create a climbing identity and begin a personal journal.

Local sample capture

## WHAT HAPPENS HERE

- Choose a username
- Enter email and password
- Optionally add current grade

## SUCCESS

Enter details → Create account → Home

## FAILURE

Submit → Read error → Correct and retry

## KEEP IN MIND

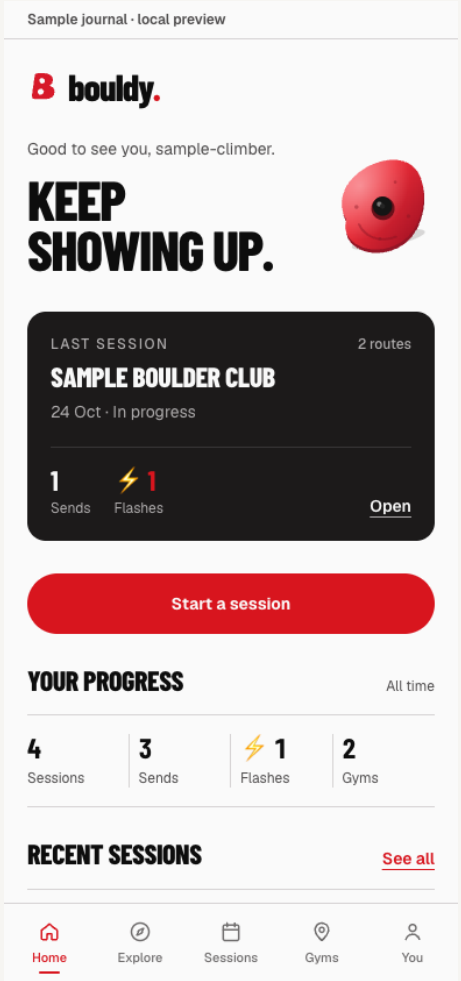

Current grade is optional free text. The current flow does not ask for a preferred gym.

## DISCUSS WITH THE TEAM

**Should onboarding explain grades, privacy or gym selection?**

# 04 Home

See a personal climbing snapshot and choose the next action.

Local sample capture

### WHAT HAPPENS HERE

- Review sends, flashes and gyms
- Open a recent session
- Start another session through Gyms

### GO CLIMBING

Home → Choose a gym → Start session

### LOOK BACK

Home → Recent session → Session review

### KEEP IN MIND

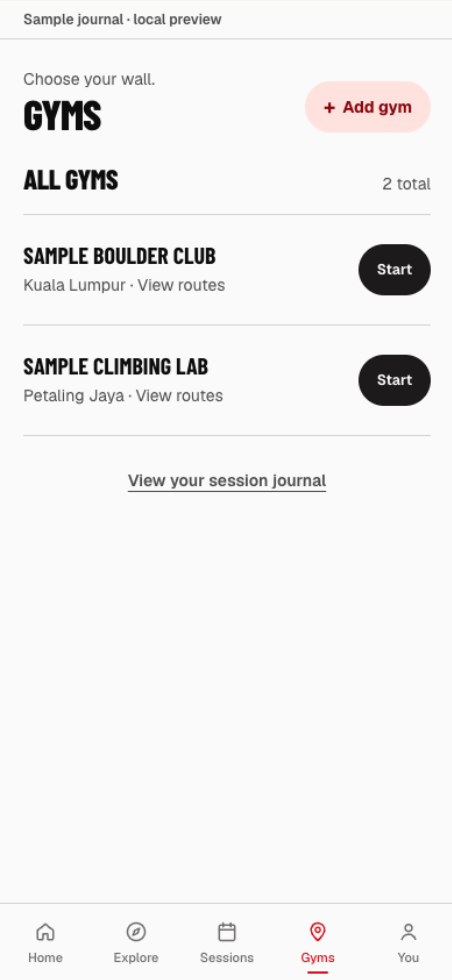

These are journal summaries. Missing history must not be shown as a trustworthy zero.

### DISCUSS WITH THE TEAM

**What is the single most useful thing to see when opening Bouldy?**

# 05 Choose a gym

Find a wall and start a visit.

Local sample capture

## WHAT HAPPENS HERE

- Open a gym
- Start a session from a gym row
- Open Add gym

## BROWSE FIRST

Gyms → Gym detail → Start session

## QUICK START

Gyms → Start session → Live session

## KEEP IN MIND

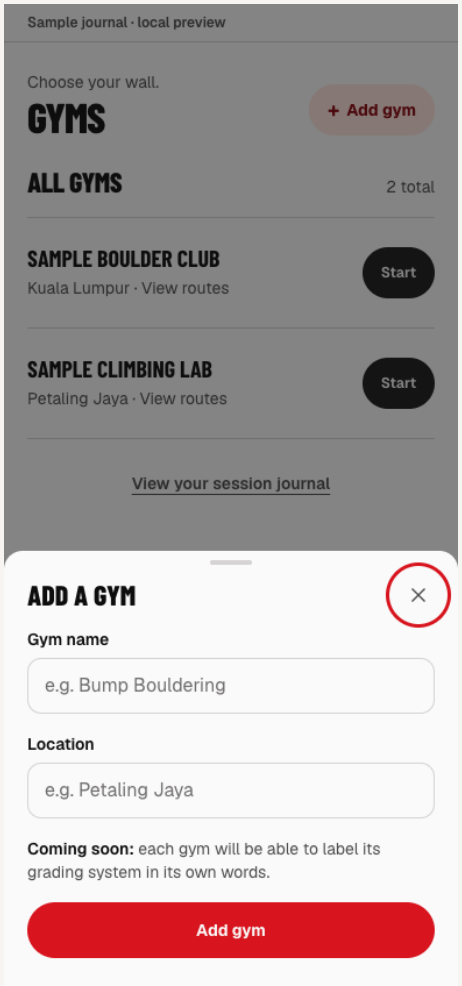

Gyms and routes are shared records; their permission model still needs team agreement.

## DISCUSS WITH THE TEAM

**How should users find the right gym as this list grows?**

# 06 Add a gym

Add a missing gym without leaving the list.

Local sample capture

## WHAT HAPPENS HERE

- Enter gym name and location
- Save or close the bottom sheet

## SAVE

Gyms → Add gym sheet → Save → Gym list

## ERROR

Save → Inline error → Correct and retry

## KEEP IN MIND

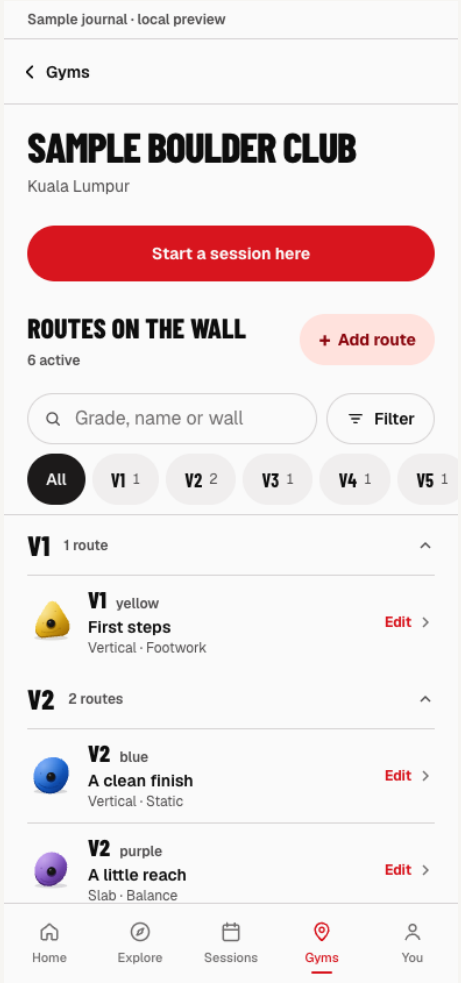

This is a short task in a bottom sheet. Duplicate-gym prevention and who may create records need decisions.

## DISCUSS WITH THE TEAM

**Can any climber add a gym, or should submissions be reviewed?**

# 07 Gym and route browser

Recognise routes on the wall and start climbing.

Local sample capture

## WHAT HAPPENS HERE

- Search by route details
- Browse grade groups
- Filter colour or wall
- Add or edit a route
- Start a session

## CLIMB

Gym detail → Start a session → Live route log

## MAINTAIN ROUTES

Choose route → Edit route → Save → Gym detail

## KEEP IN MIND

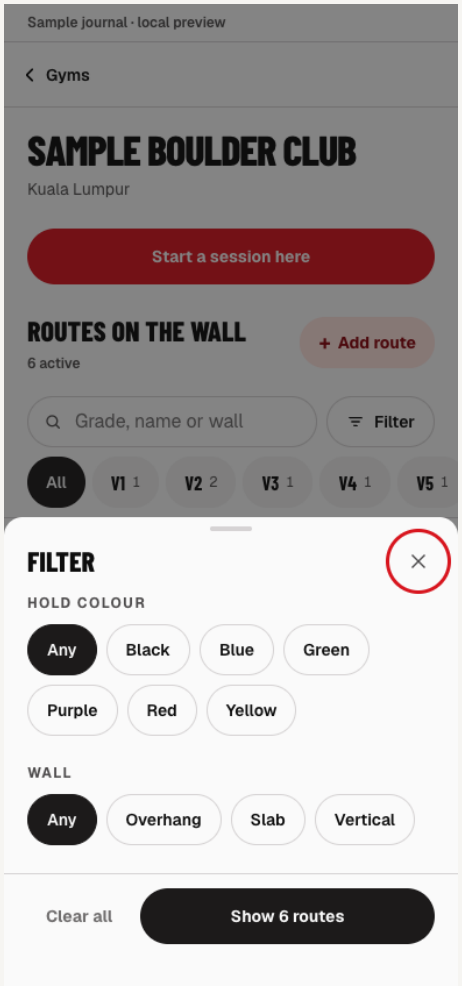

Only active routes appear for new climbing. The gym leaderboard link opens a planned page.

## DISCUSS WITH THE TEAM

**Which route details do climbers need to identify a line reliably?**

# 08 Find the right route

Reduce a busy wall to a manageable set of routes.

Local sample capture

## WHAT HAPPENS HERE

- Type a search
- Pick a grade
- Open Filters
- Filter by available colour, wall, status or gym

## NARROW THE LIST

Route list → Search / grade → Filters sheet → Matching routes

## RESET

Filtered list → Clear filters → Full list

## KEEP IN MIND

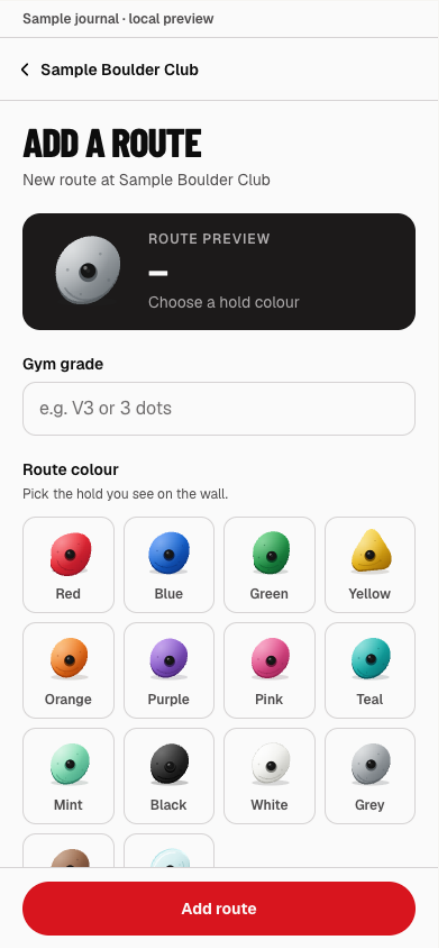

Available filters depend on the screen and data. URL/session memory keeps the browsing context after logging.

## DISCUSS WITH THE TEAM

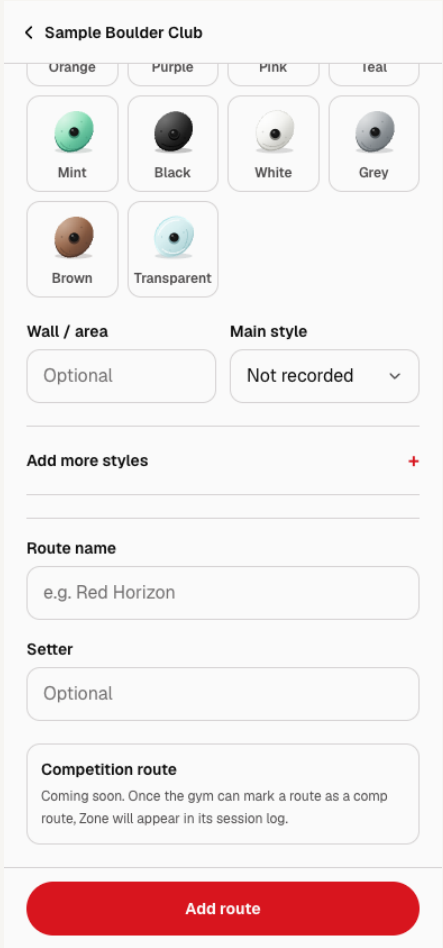

**Are grade, colour and wall enough, or do we need route numbers or photos?**

# 09 Add a route at a gym

Create the shared route record that future sessions will use.

Local sample capture

Lower screen after scrolling

## WHAT HAPPENS HERE

- Enter gym grade
- Choose hold colour and styles
- Add route name, wall and setter
- Save using the sticky action

## SAVE

Gym detail → Add route page → Save → Gym route list

## ERROR

Save → Form error → Correct and retry

## KEEP IN MIND

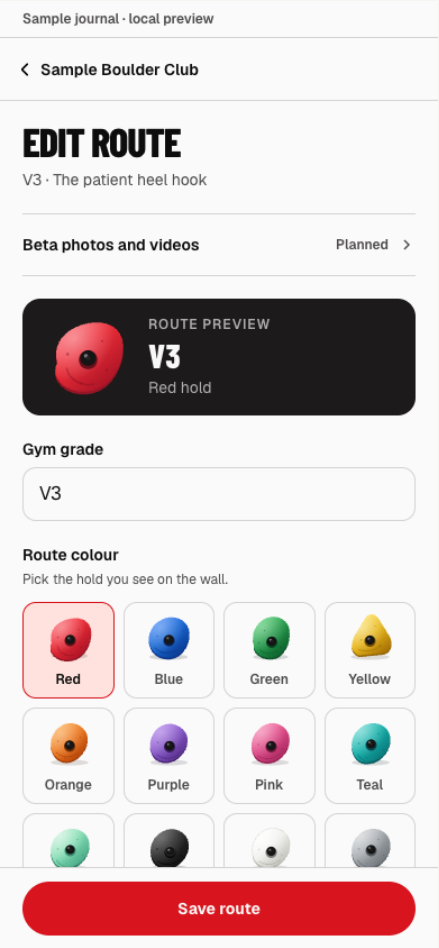

This is a full-screen form. Competition classification is labelled coming soon; it is not a working switch.

## DISCUSS WITH THE TEAM

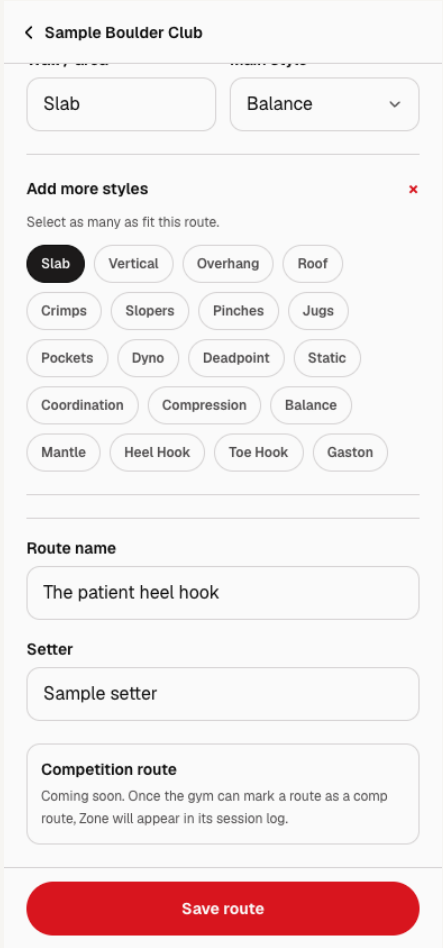

**Which fields are essential, and who should be allowed to create routes?**

# 10 Edit a route

Correct a shared active route without crowding the list.

Local sample capture

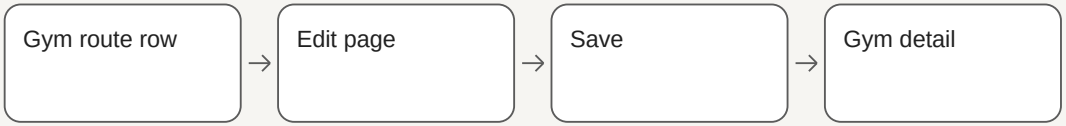

Lower screen after scrolling

## WHAT HAPPENS HERE

- Review existing route details
- Change grade, colour, wall, styles, name or setter
- Save or go back
- Open planned Beta page

## SAVE

## BACK

## KEEP IN MIND

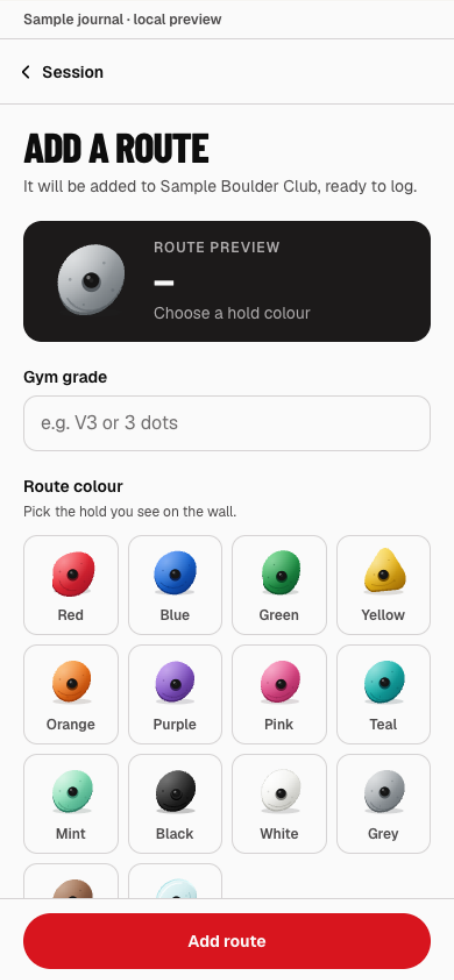

The editor accepts active routes belonging to this gym. Retired-route history remains readable. Closing the form does not save edits.

## DISCUSS WITH THE TEAM

**Who can edit shared information, and how should incorrect edits be handled?**

# 11 Add a route while climbing

Record a missing route and return to the active visit.

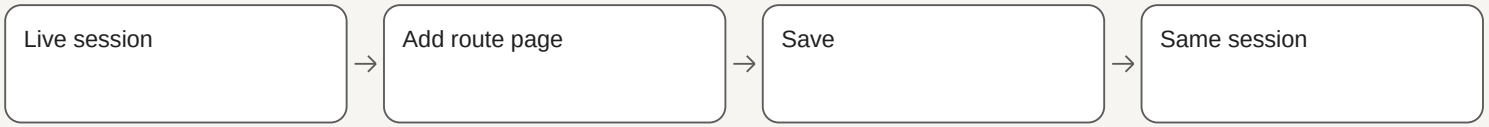

Local sample capture

## WHAT HAPPENS HERE

- Open Add route in a live session
- Complete the shared route form
- Save and return to the same session

## SAVE

## KEEP IN MIND

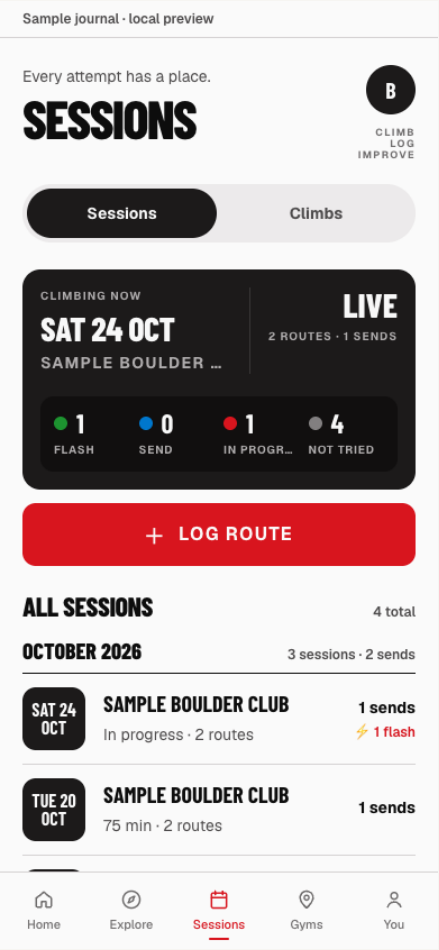

The route belongs to the gym, not only this session. A completed session cannot use this add-route journey.

## DISCUSS WITH THE TEAM

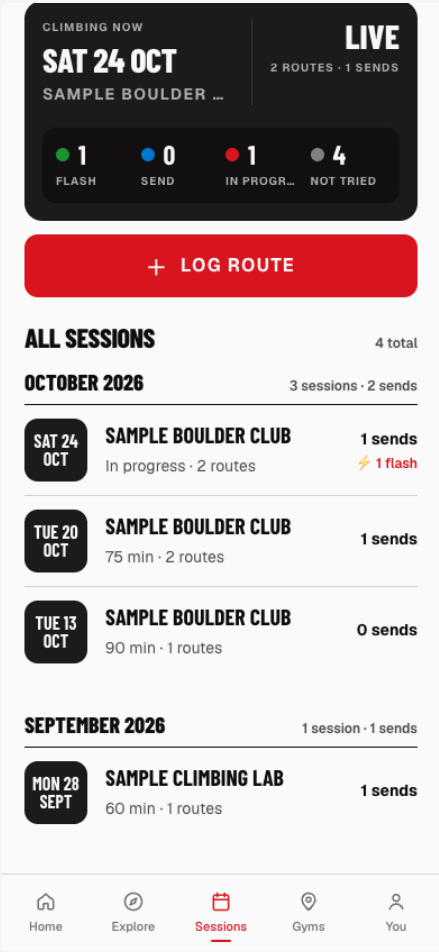

**Should the new route be ready for an immediate first log?**

# 12 Session journal

Review visits over time and resume the latest climbing context.

Local sample capture

Lower screen after scrolling

### WHAT HAPPENS HERE

- Review the featured latest session
- Open a dated session
- Show earlier months
- Switch to Climbs

### REVIEW

Sessions → Choose a visit → Session detail

### CHANGE VIEW

Sessions → Climbs switch → Climbs collection

### KEEP IN MIND

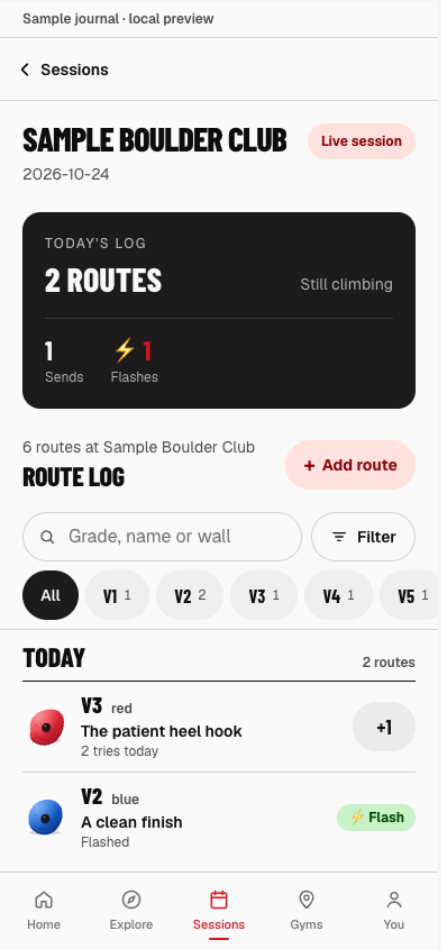

Sessions are grouped by month with progressive reveal. /history redirects here.

### DISCUSS WITH THE TEAM

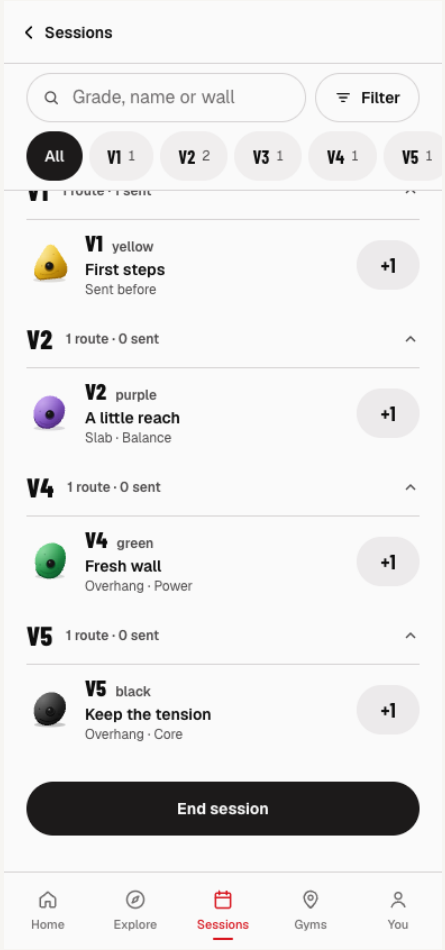

**What helps someone understand whether their climbing is improving?**

# 13 Live session

Log climbing quickly between tries.

Local sample capture

Lower screen after scrolling

### WHAT HAPPENS HERE

- Use +1 on a route row
- Open a route action sheet
- Browse Today and grade groups
- Add a missing route
- End the session

### TRY A ROUTE

Find route → +1 try → Today count updates → Try again

### FINISH A ROUTE

Open route sheet → Sent / eligible Flash → Completed route

### KEEP IN MIND

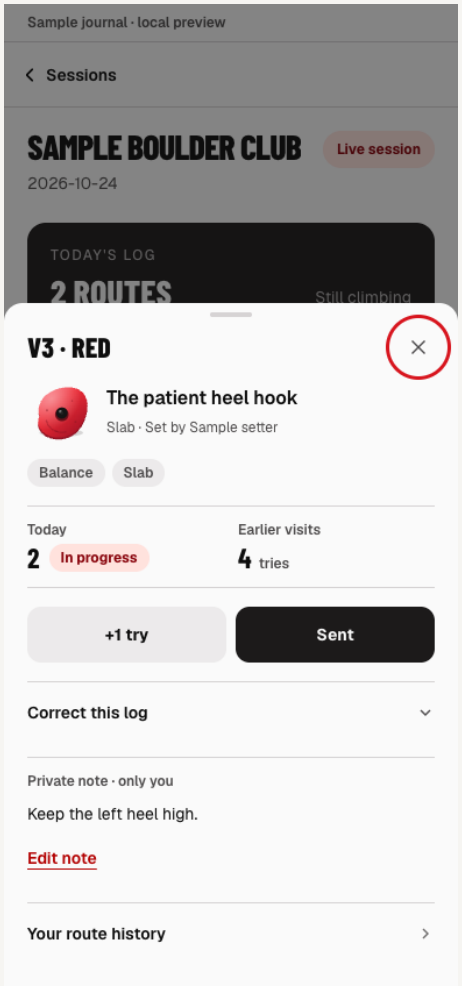

Today and earlier visits stay separate. Routes already tried are projects or repeats; a new visit does not reset lifetime flash eligibility.

### DISCUSS WITH THE TEAM

**Can this be used with one hand between climbs?**

# 14 Route actions and continuing projects

See previous effort and act on the route without losing the session.

Local sample capture

### WHAT HAPPENS HERE

- Compare Today with Earlier visits
- Add a try or mark Sent
- Correct an existing log
- Read/write a private note
- Open route history

### CONTINUE

Earlier 4 tries → Today 2 tries → Route history totals 6

### COMPLETE

Existing project → Sent → Result saved in this visit

### KEEP IN MIND

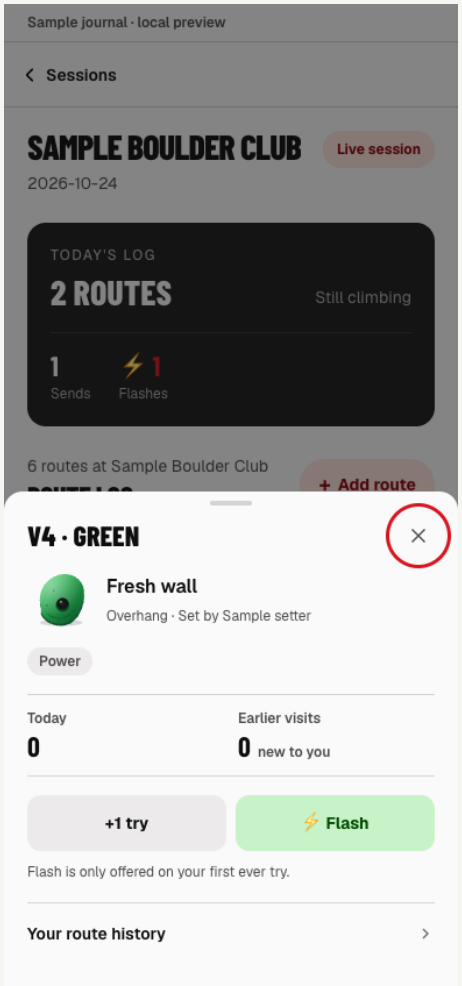

Sent changes the current outcome without adding an extra try to an existing log. If this is today's first try, Sent creates one try. Earlier sessions are not rewritten.

### DISCUSS WITH THE TEAM

**Do users understand today's count versus their total effort?**

# 15 First-try Flash

Record a first-ever successful try when complete journal history supports it.

Local sample capture

### WHAT HAPPENS HERE

- Open a route never tried before
- Choose Flash if successful
- Or log +1 for an unsuccessful try

### FIRST EVER SUCCESS

New to you → Flash → 1 try + Flash

### PREVIOUS EFFORT

Earlier tries exist → Sent available → Flash not offered

### KEEP IN MIND

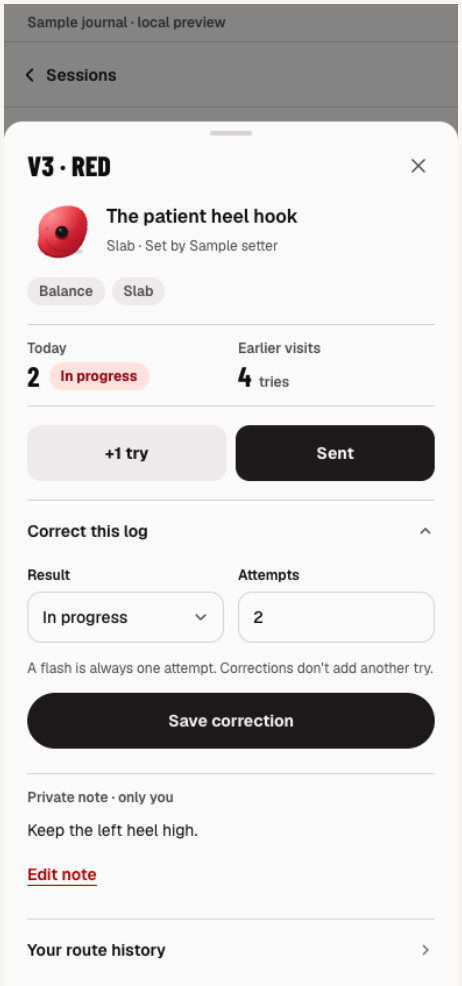

Unavailable or conflicting history suppresses Flash. These FE safeguards do not replace backend enforcement.

### DISCUSS WITH THE TEAM

**Should flash mean first ever try, and how do we explain that consistently?**

# 16 Correct a live route log

Fix a mistaken attempt count or result.

Local sample capture

## WHAT HAPPENS HERE

- Expand Correct this log
- Change result or count
- Save correction

## CORRECT

Route sheet → Edit count / result → Save → Recalculated journal

## KEEP IN MIND

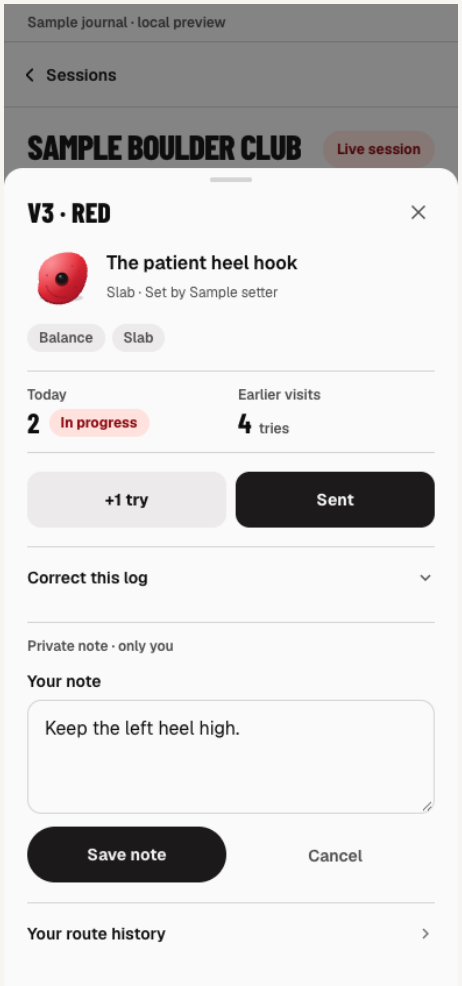

Correction edits the recorded summary; it does not add a physical try. Result/count correction is not available after a session ends.

## DISCUSS WITH THE TEAM

**Should ended sessions allow corrections? If so, what rules should apply?**

# 17 Private route notes

Remember beta or how a route felt for the next visit.

Local sample capture

## WHAT HAPPENS HERE

- Add or edit a note
- Save independently of the climb result
- Cancel without changing the saved note

## SAVE

Log exists → Write note → Save → Private note

## FAILURE

Save fails → Draft remains → Retry or cancel

## KEEP IN MIND

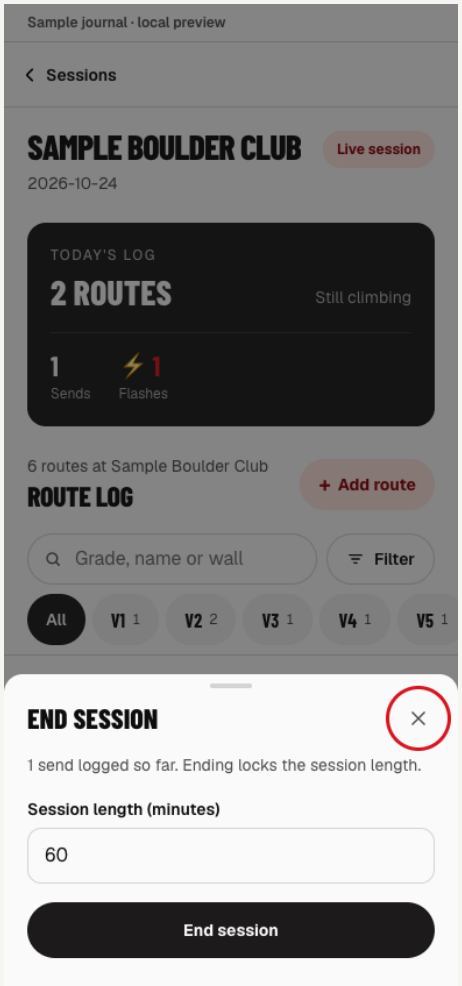

This is plain private text attached to the visit's route log. It is not a public review, felt-grade rating or session-wide note.

## DISCUSS WITH THE TEAM

**What do climbers actually want to remember after a try?**

# 18 End a session

Finish the visit and record its length.

Local sample capture

### WHAT HAPPENS HERE

- Open End session
- Confirm session length in minutes
- Submit or close the sheet

### FINISH

Live session → End-session sheet → Confirm minutes → Session journal

### KEEP IN MIND

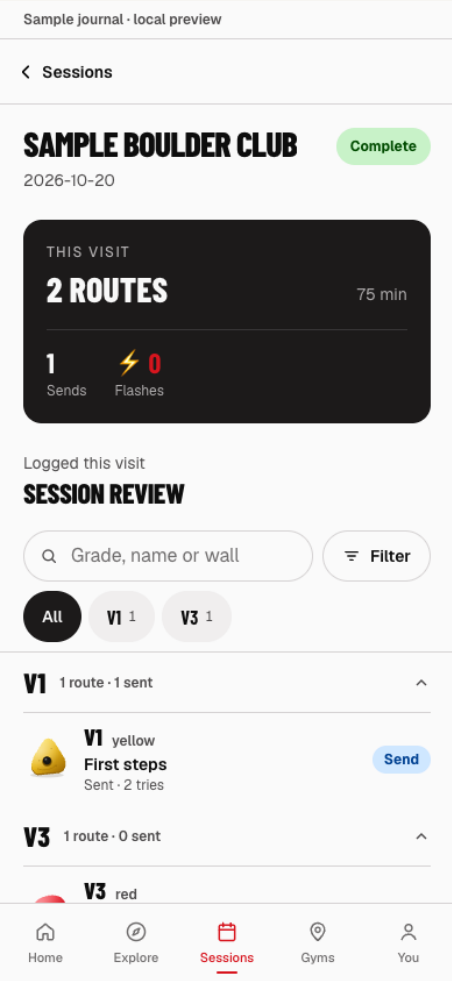

The current interface uses a positive duration to identify an ended session. An explicit lifecycle/timer is separate backend work.

### DISCUSS WITH THE TEAM

**Do we need automatic timing, manual length, or both?**

# 19 Completed session review

Look back at what was logged during one visit.

Local sample capture

## WHAT HAPPENS HERE

- Review visit duration and results
- Browse only routes logged that visit
- Open route details and private notes
- Return to Sessions

## REVIEW

Session journal → Completed visit → Route sheet → Route history

## KEEP IN MIND

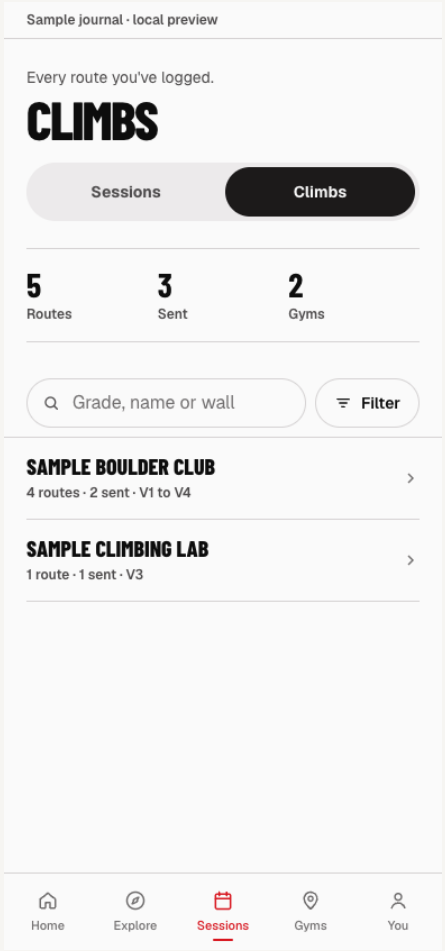

No new attempts, route creation or result/count corrections are offered here. Private notes remain editable. Retired logged routes remain visible.

## DISCUSS WITH THE TEAM

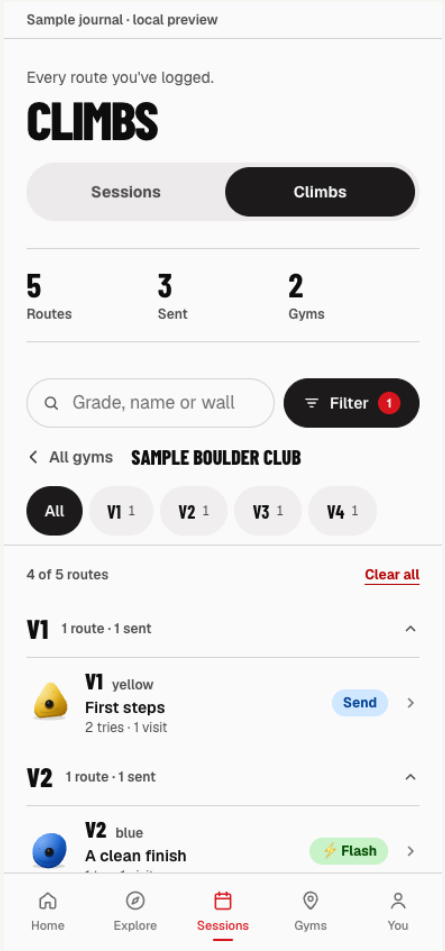

**Which post-session summary would be worth revisiting or sharing later?**

# 20 Climbs collection

See the routes you have ever logged, grouped by gym and grade.

Local sample capture

Local sample capture

## WHAT HAPPENS HERE

- Switch from Sessions
- Choose a gym
- Search/filter and browse grades
- Open one route's history

## DRILL DOWN

Sessions → Climbs → Choose gym → Route history

## KEEP IN MIND

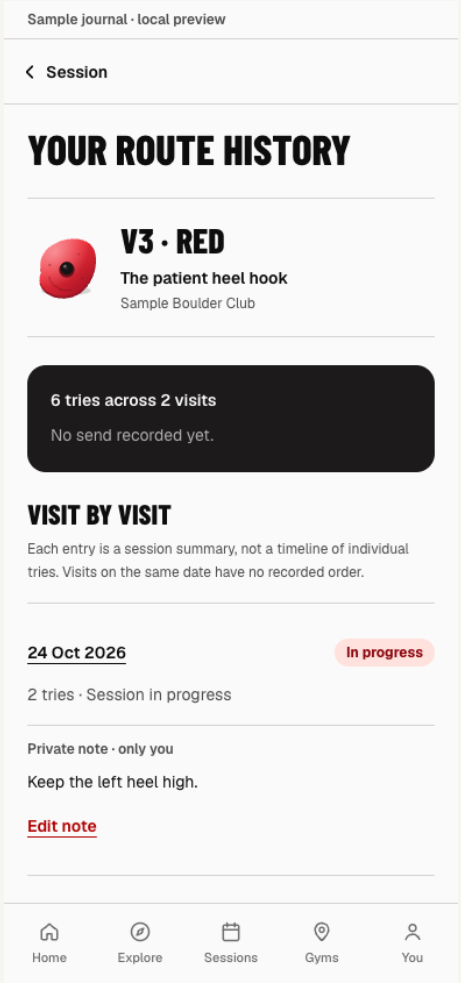

Best result, total tries and visits are derived from owned journal records. Grades are grouped within each gym.

## DISCUSS WITH THE TEAM

**Is a route collection or a visit diary the more useful default?**

# 21 Your route history

Understand work on one stable route across multiple visits.

Local sample capture

## WHAT HAPPENS HERE

- Read total tries and send status
- Review each dated visit
- Edit private notes
- Return to a source session

## LOOK BACK

Route sheet / Climbs → Route history → Choose date → Source session

## KEEP IN MIND

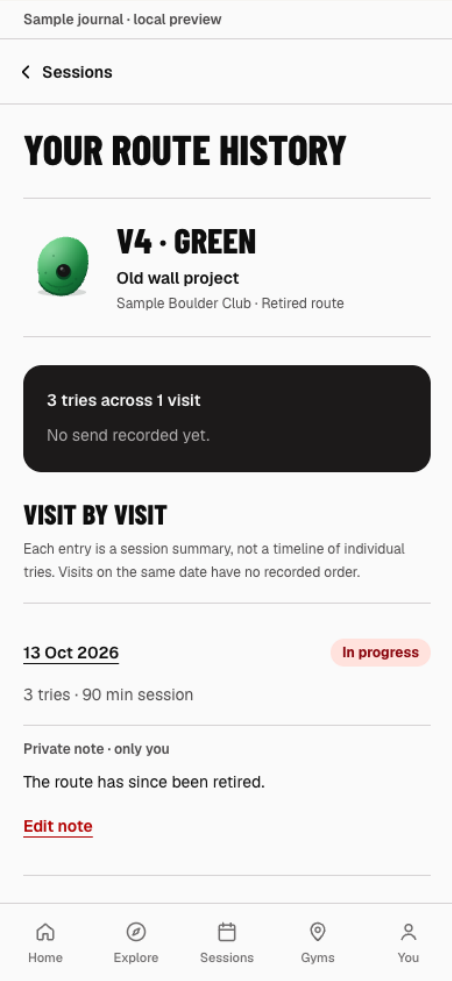

Entries are session summaries, not a per-try timeline. The exact ordering of visits on the same date is unknown.

## DISCUSS WITH THE TEAM

**Which progress details are missing: felt grade, first-send date or something else?**

# 22 History after a wall reset

Keep a climber's effort visible after the physical route disappears.

Local sample capture

### WHAT HAPPENS HERE

- View the retired label
- Review old logs and private notes
- Open the original visit

### RESET BOUNDARY

Old route retired → History preserved → New route gets new ID

### KEEP IN MIND

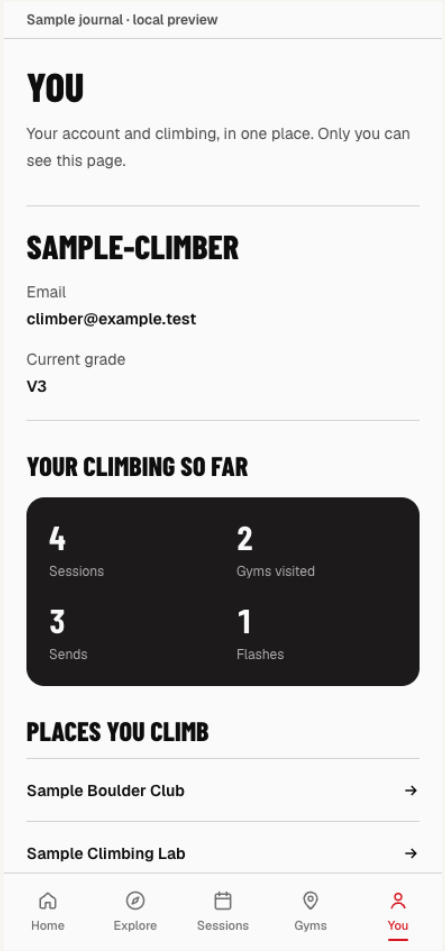

A similar name, colour or grade does not make a new wall-set the old route. Historical counts must stay attached to the old ID.

### DISCUSS WITH THE TEAM

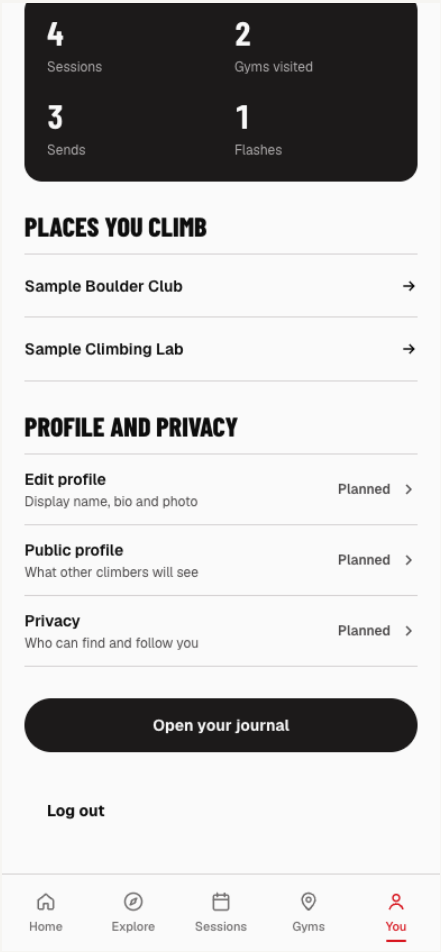

**Who tells Bouldy when a wall is reset, and who retires the routes?**

# 23 You: personal account

Review your own identity, activity and places you climb.

Local sample capture

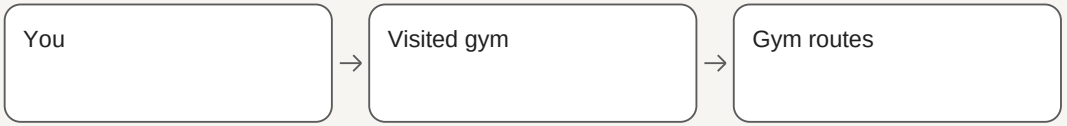

Lower screen after scrolling

### WHAT HAPPENS HERE

- Read account details and current grade
- Review personal totals and visited gyms
- Open planned profile/privacy screens
- Open journal or log out

### PERSONAL PROGRESS

### SIGN OUT

### KEEP IN MIND

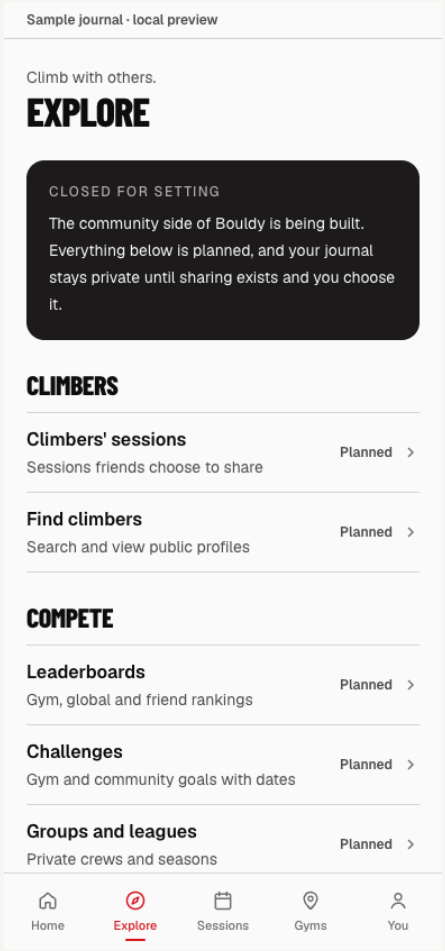

Email is shown only on this owner screen. Profile editing, public profile and privacy settings are placeholder destinations.

### DISCUSS WITH THE TEAM

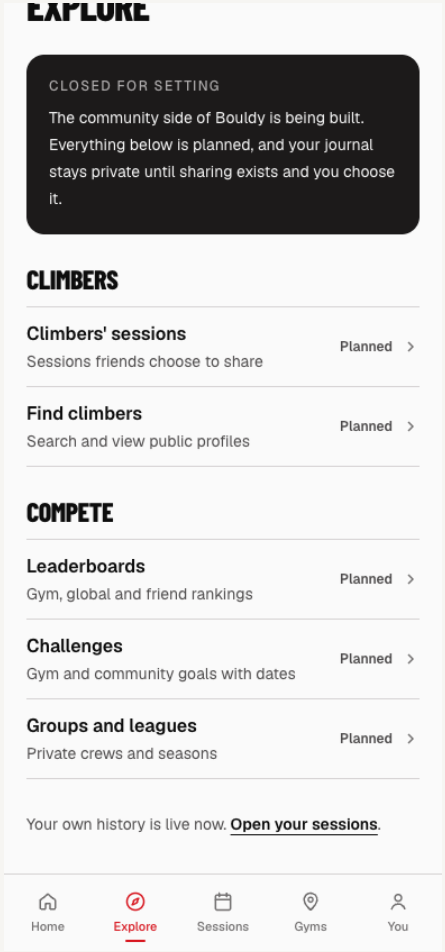

**What should belong to a private account versus a public climbing identity?**

# 24 Explore: community menu

Show the planned community directions without inventing social activity.

Local sample capture

Lower screen after scrolling

## WHAT HAPPENS HERE

- Open feed, climber search, rankings, challenges or groups plans
- Return to your working session journal

## TODAY

Explore → Choose feature → Planned page

## RETURN

Explore → Open your sessions → Personal journal

## KEEP IN MIND

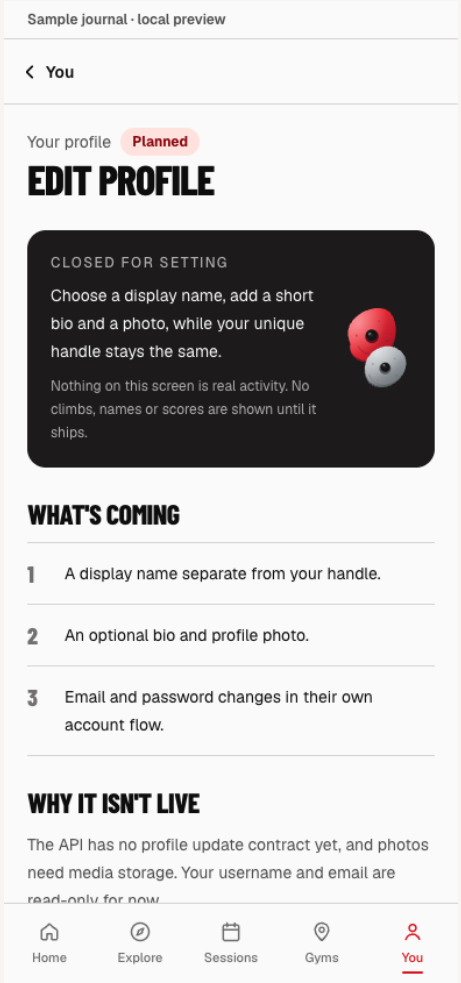

The menu is built; the community services behind it are not. There are no real social metrics or fake rows.

## DISCUSS WITH THE TEAM

**Which one community feature would make the journal more valuable?**

# 25 Edit profile

Proposed: edit a climbing display name, bio and profile photo.

Local sample capture

## WHAT HAPPENS HERE

- Today: read the plan and return to the parent screen
- Future journey below is a proposal, not a working control

## CURRENT

Parent screen → Planned page → Back

## PROPOSED

You → Edit fields → Save profile

## KEEP IN MIND

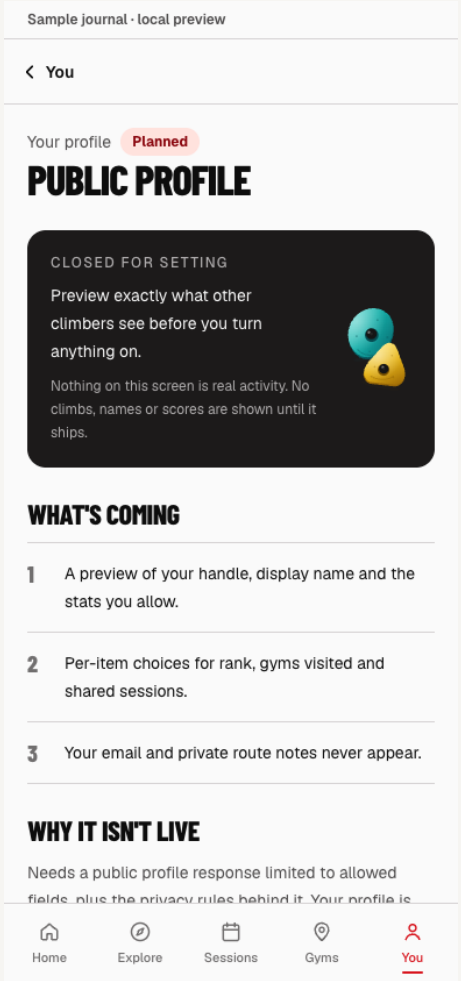

Needs owner profile fields, validation and update APIs; avatars also need media storage.

## DISCUSS WITH THE TEAM

**Which identity fields are essential for the first release?**

# 26 Public profile

Proposed: control the identity and selected statistics other climbers see.

Local sample capture

## WHAT HAPPENS HERE

- Today: read the plan and return to the parent screen
- Future journey below is a proposal, not a working control

## CURRENT

Parent screen → Planned page → Back

## PROPOSED

Opt in → Public identity → Allowed statistics

## KEEP IN MIND

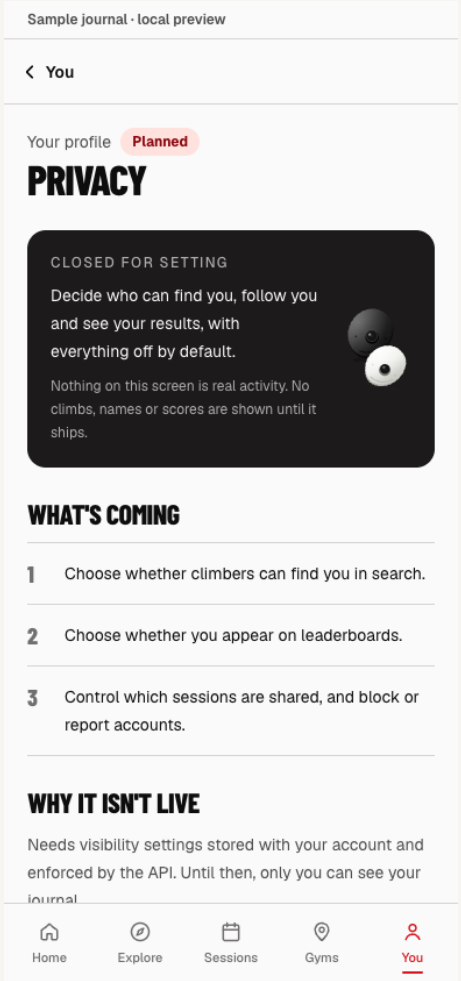

Needs a separate public response and enforceable visibility rules. Do not expose the owner email or private notes.

## DISCUSS WITH THE TEAM

**Should profiles be discoverable, link-only or private by default?**

# 27 Privacy and sharing

Proposed: choose discoverability, ranking participation and sharing.

Local sample capture

## WHAT HAPPENS HERE

- Today: read the plan and return to the parent screen
- Future journey below is a proposal, not a working control

## CURRENT

Parent screen → Planned page → Back

## PROPOSED

Choose visibility → Save settings → API enforces choice

## KEEP IN MIND

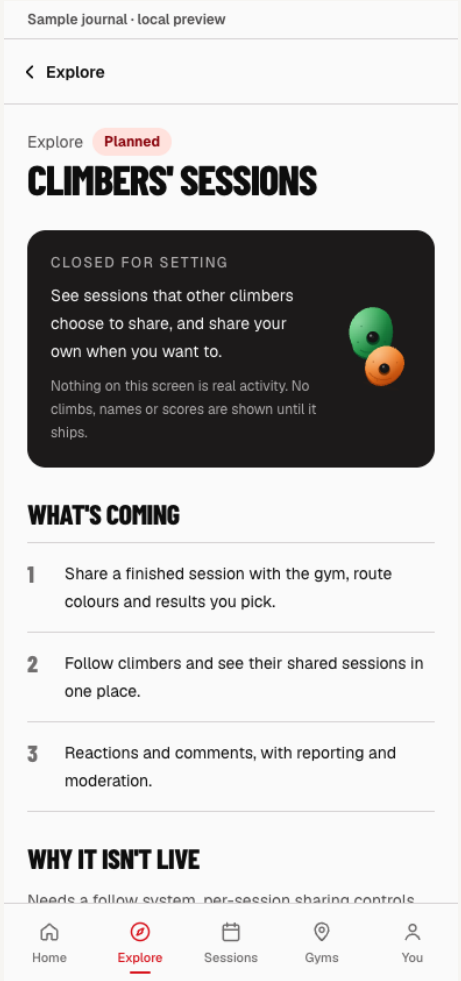

Needs stored visibility settings and backend enforcement, plus blocking/reporting decisions.

## DISCUSS WITH THE TEAM

**Which privacy choices must exist before the first social feature?**

# 28 Climbers' sessions

Proposed: see sessions friends deliberately share.

Local sample capture

## WHAT HAPPENS HERE

- Today: read the plan and return to the parent screen
- Future journey below is a proposal, not a working control

## CURRENT

Parent screen → Planned page → Back

## PROPOSED

Choose sharing → Publish session → Friends see feed

## KEEP IN MIND

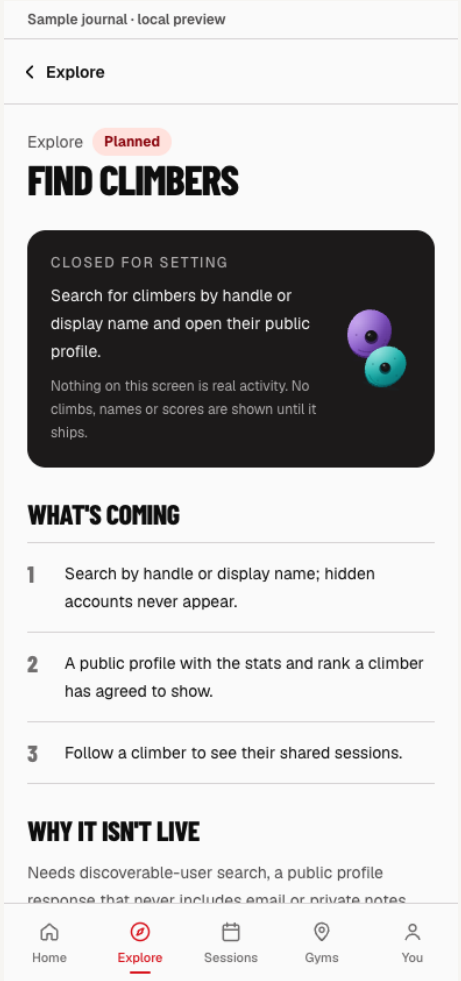

Needs sharing/follow relationships, privacy filtering and a feed service. Private journals must not become public automatically.

## DISCUSS WITH THE TEAM

**Would users want a feed, or simpler links to share a session?**

# 29 Find climbers

Proposed: find opted-in climbers and open their public identity.

Local sample capture

## WHAT HAPPENS HERE

- Today: read the plan and return to the parent screen
- Future journey below is a proposal, not a working control

## CURRENT

Parent screen → Planned page → Back

## PROPOSED

Search → Matching public users → Public profile

## KEEP IN MIND

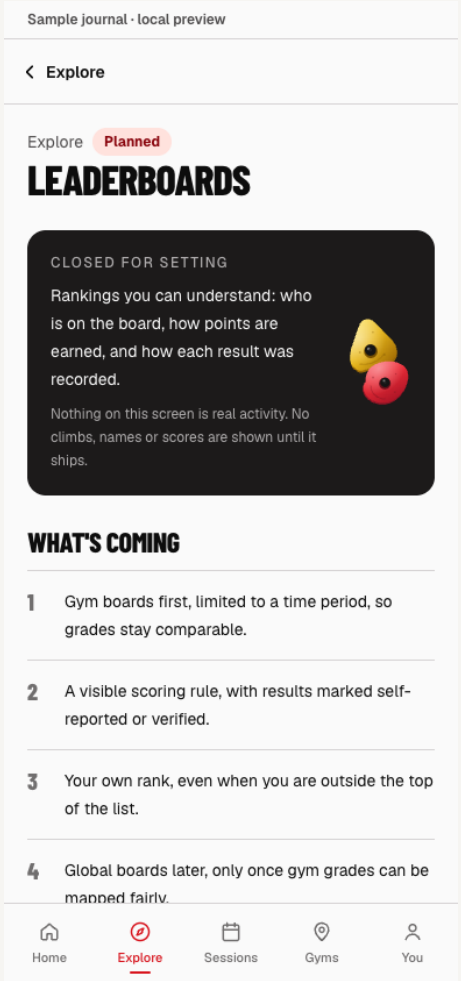

Needs visibility-filtered search and public-profile APIs; no user search works here yet.

## DISCUSS WITH THE TEAM

**How should people find friends without exposing private accounts?**

# 30 Leaderboards and points

Proposed: compare results fairly, starting within a gym.

Local sample capture

## WHAT HAPPENS HERE

- Today: read the plan and return to the parent screen
- Future journey below is a proposal, not a working control

## CURRENT

Parent screen → Planned page → Back

## PROPOSED

Opt in → Choose gym / period → Standings + score

## KEEP IN MIND

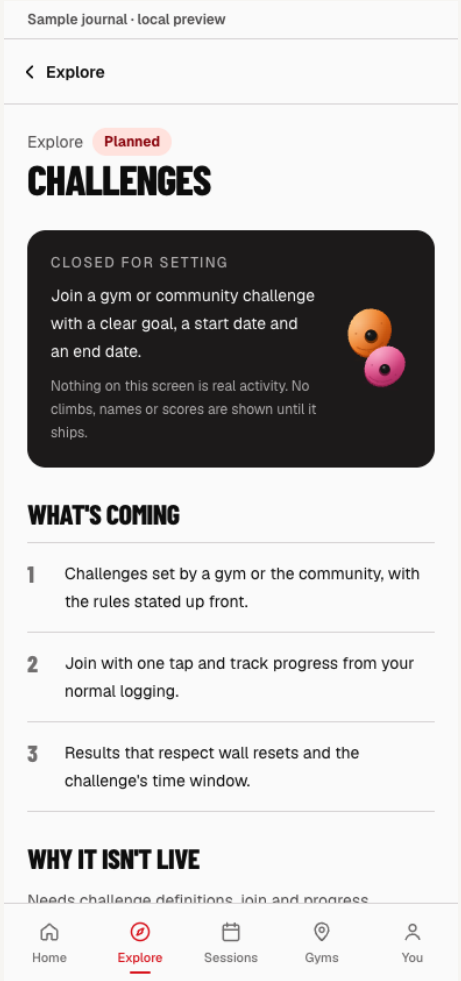

Needs scoring, eligibility, periods, ties, trusted result timing and ranking APIs. Global comparison additionally needs defensible gym-grade mapping.

## DISCUSS WITH THE TEAM

**What behaviour should points reward, and is competition a priority now?**

# 31 Challenges

Proposed: join a goal with clear rules and a time window.

Local sample capture

### WHAT HAPPENS HERE

- Today: read the plan and return to the parent screen
- Future journey below is a proposal, not a working control

### CURRENT

Parent screen → Planned page → Back

### PROPOSED

Choose challenge → Join → Log normally → Track progress

### KEEP IN MIND

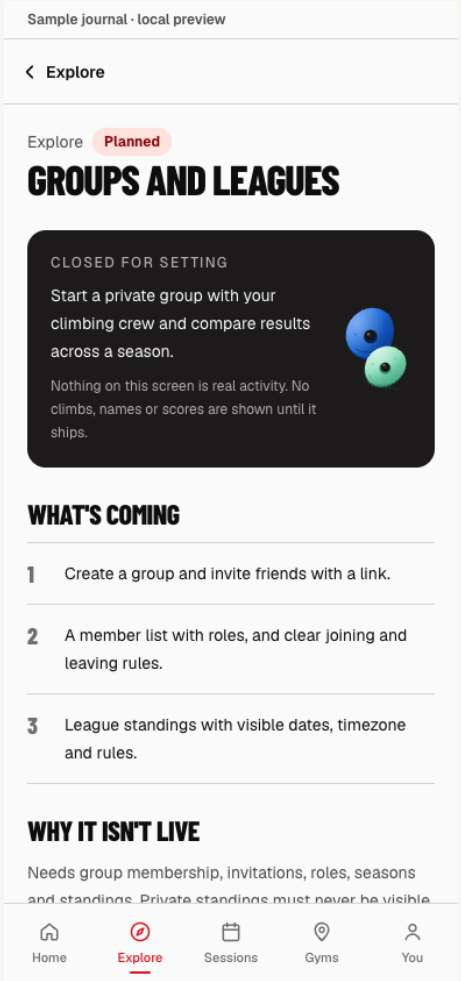

Needs challenge definitions, joins, progress, time windows and verification/reset rules. Gym-run challenges may need operator tools.

### DISCUSS WITH THE TEAM

**What is the smallest challenge people would actually join?**

# 32 Groups and leagues

Proposed: climb with a private crew and compare across a season.

Local sample capture

## WHAT HAPPENS HERE

- Today: read the plan and return to the parent screen
- Future journey below is a proposal, not a working control

## CURRENT

Parent screen → Planned page → Back

## PROPOSED

Create group → Invite friends → Join season → Standings

## KEEP IN MIND

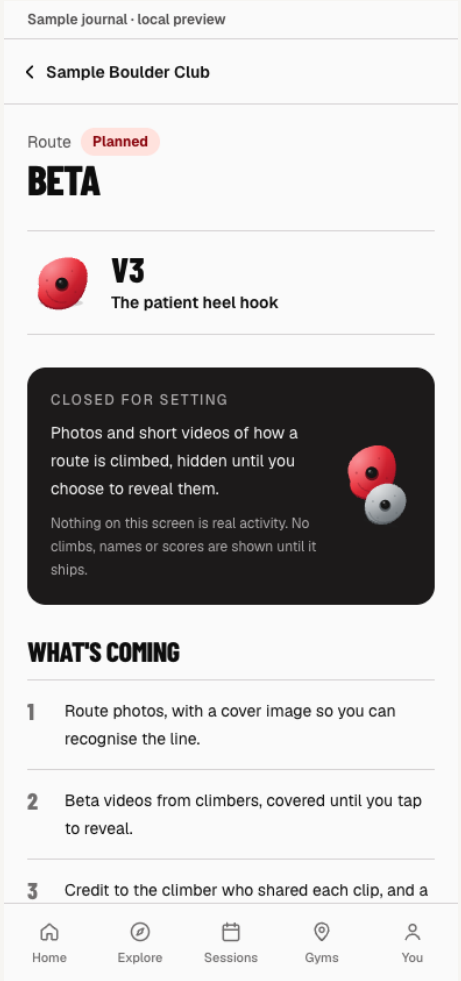

Needs membership, invitation permissions, roles, seasons and private standings.

## DISCUSS WITH THE TEAM

**Do we want informal groups first, or competitive leagues?**

# 33 Route photos and beta videos

Proposed: recognise a line and reveal climbing beta when wanted.

Local sample capture

## WHAT HAPPENS HERE

- Today: read the plan and return to the parent screen
- Future journey below is a proposal, not a working control

## CURRENT

Parent screen → Planned page → Back

## PROPOSED

Choose route → View photo → Reveal beta → Credit / report

## KEEP IN MIND

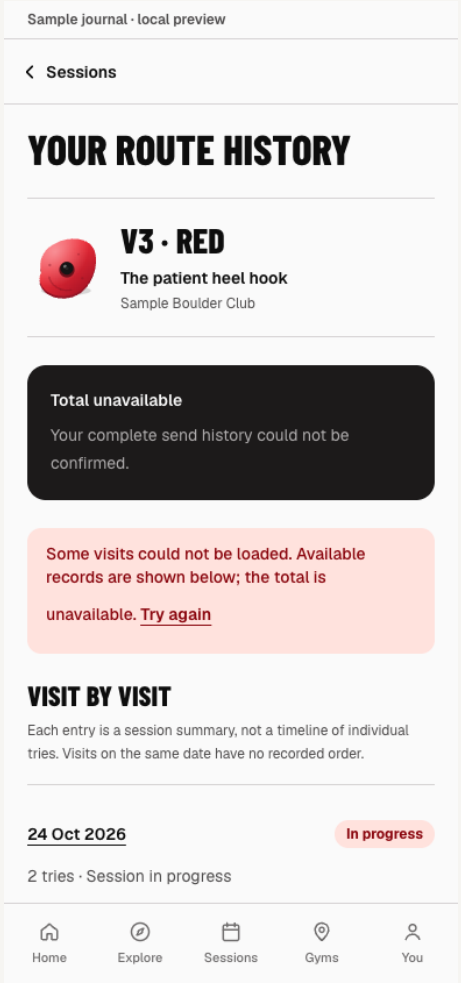

Needs authorised persistent media storage, upload/link policy, processing, attribution and moderation. No upload or playback flow is implemented here.

## DISCUSS WITH THE TEAM

**Would one route photo or saved video links solve most of the immediate need?**

# 34 Missing data and recovery

Show what is known without inventing totals.

Local sample capture

## WHAT HAPPENS HERE

- Read available records
- See an unavailable total
- Retry by reopening the view

## READ FAILURE

Some visits fail → Total unavailable → Retry

## INTEGRITY CONFLICT

Conflicting logs → Explain ambiguity → Review source records

## KEEP IN MIND

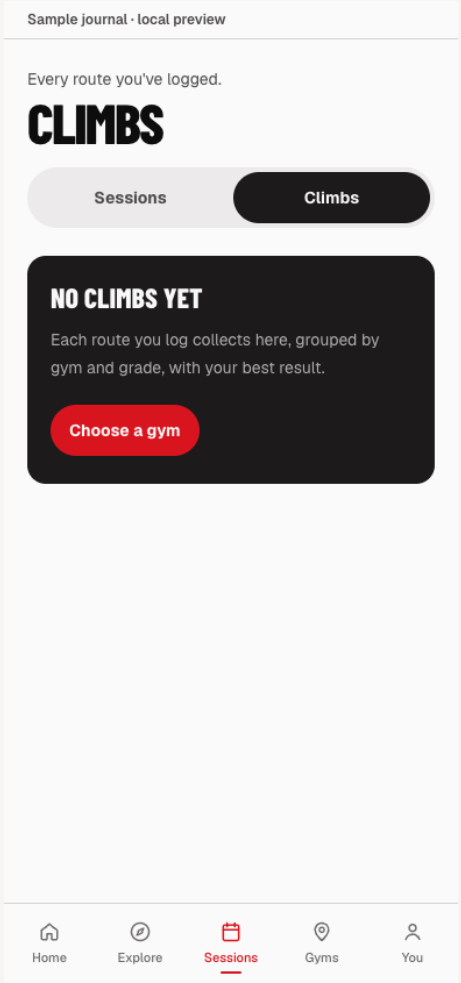

A failed request is not an empty session. Duplicate records also make totals uncertain and may pause logging. The capture shows a sample read failure, not a production outage.

## DISCUSS WITH THE TEAM

**What information and recovery action should a climber see when saving or loading fails?**

# 35 First-use empty state

Explain how a new climber can build their journal.

Local sample capture

## WHAT HAPPENS HERE

- Read what will appear here
- Choose a gym
- Log the first route

## FIRST USE

No climbs yet → Choose gym → Start session → First log

## KEEP IN MIND

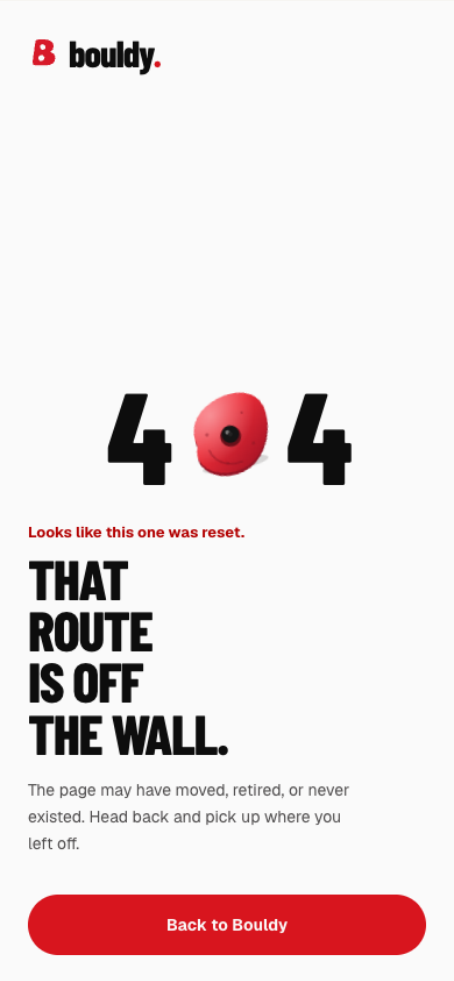

This is a deliberately empty sample account state, not failed history.

## DISCUSS WITH THE TEAM

**Should first use guide people into one simple logged route?**

# 36 Missing page

Give a useful way back from an invalid link.

Local sample capture

### WHAT HAPPENS HERE

- Read the missing-page message
- Follow the Home link

### RECOVERY

Unknown URL → 404 → Home / Welcome

### KEEP IN MIND

Home resolves according to sign-in state. /history is a compatibility redirect, not a separate page.

### DISCUSS WITH THE TEAM

**Where might shared or old links break, and how should we recover?**
